

230

Ink Conditioner
Releases Tack Instantly

Ink Conditioner 230 is one of HURST'S most popular and versatile ink additives.

There is not another product like it in today's Printing Industry.

Works well in all inks, whether oil or copolymer base.

Contains no process wax or similar materials that cause scumming and drying problems or difficulty in printing one colour over another.

Features and Benefits

- ▼ No. 230 releases excessive tack instantly.
- ▼ INK CONDITIONER 230 is so versatile it can do the job of two or three different ink additives.
A good example of the uniqueness of this product is its ability to practically eliminate the "hickey" problem. No. 230 causes bits of paper, lints, dry ink, etc. to travel from the plate and rollers back up the ink train to the ink fountain, where they may be easily picked out and discarded.
- ▼ No. 230 acts to adjust ink body and length to improve large solids and half tones.
- ▼ No. 230 stops "puddling" and "mottling" of solids.
- ▼ No. 230 is a soft paste that mixes easily in the ink duct. (Not for use with UV inks.)
- ▼ No. 230 helps achieve inkwater balance quickly.
- ▼ INK CONDITIONER 230 is available in 1-litre resealable tins.

Directions:

Add up to 15% volume/volume to release excessive tack. For sheet fed work, a tack sequence of about 2 inkometer units between each deck of a multi-colour press is recommended. Adjust tack differential to about 1 inkometer unit between each deck of a web press. Close container after each use.
